## DECENTRALIZATION

What is [decentralization](#)?

What are its [benefits and advantages](#)?

Decentralized marketing is created on an automated contract that guarantees you maximum security and stability.

A [smart contract](#) is an algorithm with automatic execution. It exists inside the Smart Chain blockchain\*, which is one of the top cryptocurrencies. Smart contracts, like cryptocurrencies themselves, are decentralized. They work strictly according to a certain program, and once they are launched, it is impossible to change their mode of operation. The code that determines the logic of a smart contract is written in a blockchain, and all calculations are performed by millions of computers around the world. This ensures that a smart contract cannot be hacked or stopped.<sup>6</sup>

\* [Blockchain](#) is an immutable register of transactions and information, protected from any further manipulation by cryptographic methods.

It is simultaneously maintained by thousands of independent computers around the world.
